Catalina Plasma

Plasma Rich Cell Therapy

The internal essence of the blood inside you contains life-giving fundamental protein growth factors that are designed to restore and strengthen your body. Plasma Cell Therapy harnesses a high concentration of your own biological nutrient rich cells and unleashes them to naturally promote skin health by stimulating a rebuilding of the underlying structural integrity of your skin. With a simple quick and advantageous process your own blood is safely repaired on the physicians premises and is delivered to your skin within the same treatment session.

How does it work?

It is a regenerative medicine and works best aesthetically when it is introduced into the skin your own concentration of cells will then work with your own body to naturally promote a “structure and signals” process for new tissue and collagen growth.

When will I see results?

After the treatment patients often noticed fine lines and wrinkles have softened and deeper wrinkled areas, such as nasolabial folds, may look more plump and smoother. However according to studies the main goal of the treatment is to stimulate

fibroblast and develop long-term collagen formations in the dermis.

Any plumping in the treatment areas may slowly be absorbed into the dermis creating a platform for stronger skin anymore healthy appearance.

Overall results are gradual and will vary from person-to-person based on health age and genetic makeup most patients enjoyed quantifiable improvements in skin complexion texture and tone usually within three weeks subtle improvements can progressively continue for up to a year.

What areas can be treated?

It is derived from your own biological makeup and does not contain synthetic products therefore virtually any area of the body can be treated such as face, neck, chest, hands, scars, etc.

How many treatments will I need?

The basic strategies for the program can range from 1 to 3 treatments spaced 4 to 6

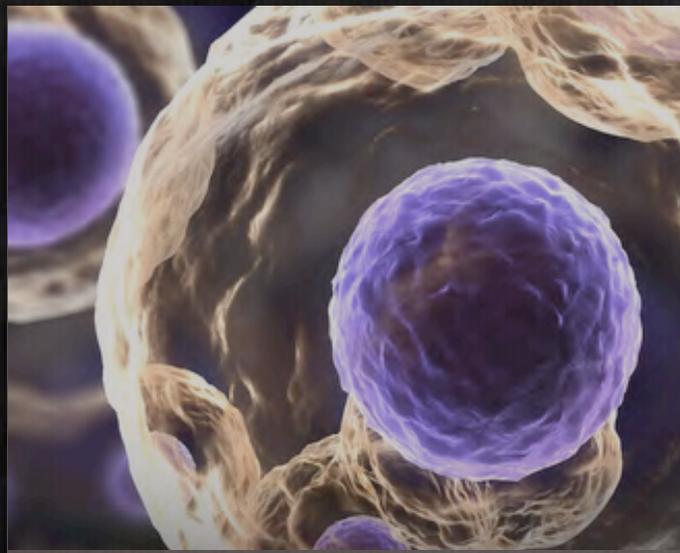

weeks apart. Once you have discussed your primary priorities of your skin needs with your physician the number of treatments could vary.

Are there any side effects?

Because all constituents retrieved are exclusively from you (autologous in origin), there is virtually no risk of an allergic reaction or intolerance. Nevertheless before the treatment you need to disclose all the medications you're taking (including herbs) with your doctor.

How will I take care of my skin after the treatment?

In order to enjoy the maximum response to your treatment, you should eat right, drink lots of water and incorporate the recommended facial care by your physician.

Use of this treatment has been on a variety of aesthetic surgical and wound care fields of medicine. It isn't careful design leading edge product that has been scientifically verified for aesthetic application. It provides patients with the best and rich plasma including platelet counts and growth factor analytics.
